

File System Connector for Upload and Download of Files

In this sample, we make use of the File System Connector. We illustrate how to upload, download and delete a sample file from your file system. Additionally, we make use of the “File Exist” function to see if the sample file is in your file system.

Sample Highlights:

1. Connecting to a File System
2. Uploading a file
3. Downloading a file
4. Deleting a file
5. Checking if a file exists

Configuring the Sample application:

1. Open the FileSystemConnector application with the Stadium Designer.
2. Expand Connectors in the Application Explorer panel.
3. Change the directory you want to upload the sample file to, in the MyFileSystem properties panel.
4. Click on “Preview” on the Ribbon in the Stadium Designer. This will deploy the solution to localhost and open it in your browser.
